

Abstract

Thesis title:

A case report of physiotherapy treatment of a patient with peripheral facial palsy

Thesis summary:

The thesis focuses on physiotherapy treatment techniques for peripheral facial palsy. It consists of a theoretical part and a practical part. The theoretical part covers basic anatomy and neurology, the characteristics, clinical picture, diagnosis, and treatment. The practical part is a case report of a patient with peripheral facial palsy. The case report includes the clinical examination, treatment, progress, and outcome. The thesis was written based on a practical training in Regional Hospital Kladno from Jan 4 – 29, 2016.

Key words:

case report, peripheral palsy, nervus facialis, facial nerve, Bell's palsy, physiotherapy, rehabilitation
